Location/Qualifiers
           Sfil (ggccattatggcc); Site 2: Sfil (ggccgctcggcc);
Library is oligo-dT primed and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
5'-ATTCTACAGGCCGAGCAGGCGAGCATG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."

```

Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NOTE: This is a 'working draft' sequence. It currently
consists of 26 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will as soon as it is available be preserved. 128294 128394 138141 138241 150688 150788 166415 166515 87862 95727 95827 105055 105155 116717 116817 41957 42057 48095 48195 53215 53315 53315 58850 58950 66145 66245 73034 73034 73034 80331 80331 80333 36283 14487 17150 17250 21415 21515 21515 25172 25272 30646 30746 11003 11103 36183 14387 8311 8411 ρί /organism="Bos taurus" /mol_type="genomic DNA" /db_xref="taxon:9913" /clone="RP42-254I13" Location 105154: gap of unknown length

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: HRI and RAB.

CC The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are chistidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the candidosis. Also disclosed are compositions comprising the histatin candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of comprising the polypeptide, is useful for treating (e.g. gene therapy) a discrear in a mammal, particularly microbial or fungal infections. The consposition comprising the polynucleotide is also useful in genome mapping, physical consponder or polynucleotide is also useful for treating fungal or bacterial conspections of the oral cavity (e.g. dental caries, plaque or tartar), cavity (e.g. dental caries, plaque or tartar), cavity (e.g. dental caries, plaque or tartar), cavity candidation as expensional infections. The polypeptide or such as systemic candida infection. The polypeptide or polynucleotide is also useful for veteriary applications e.g. for creating mastitis. The sequence presented is a cDNA encoding a bovine consist in like nolypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The

The invention discloses isolated histatin polynucleotides and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 histatin polynucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                          Cow; gene; ss; histatin; bovine; salivary secretion; oral cavity; non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tarcystic fibrosis; systemic infection; Candida infection; mastitis; fungicide; antibacterial.

                                                                                                                                                                            Ş
                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                               to function as part of the non-immune defence system, particularly in the CC oral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral CC candidosis. Also disclosed are compositions comprising the histatin CC polypeptide or polynuclectide, and at least one compositions of physiological or pharmaceutical carriers or immunostimulants. The CC histatin polynuclectide, polypeptide, or the cosmetic composition CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a CC disorder in a mammal, particularly microbial or fungal infections. The CC histatin polynuclectide is also useful in genome mapping, physical CC mapping or in the positional cloning of genes. Specifically, the CC polypeptide or polynuclectide is useful for treating fungal or bacterial CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis CC caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating Systemic infections such as systemic Candida infection. The polypeptide CC or polynuclectide is also useful for veterinary applications e.g. for CC treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.

e.g. infections of the oral cavity, vagina, urethra, ear or skin,
                                                                                                                                                                                                                                                                                                                                                             Sequence 585
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cystic fib:
fungicide;
                                                                                                                                                                                                                                                                                                                                                    New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mare e.g. infections of the oral cavity, vagina, urethra, ear or skin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cow, gene, ss, histatin, bovine, salivary secretion, oral cavity; non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis;

The histartin polynuclectide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynuclectide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating massitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 525 BP;

                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses isolated histatin polynuclectides and CC polypeptides, which comprise sequences expressed in bovine. Histatins are CC histidine rich and specific to the salivary secretions. They are believed CC to function as part of the non-immune defence system, particularly in the CC candidosis. Also disclosed are compositions comprising the histatin CC candidosis. Also disclosed are compositions comprising the histatin of CC polypeptide or polynuclectide, and at least one component consisting of CC physiological or pharmaceutical carriers or immunostimulants. The CC physiological or pharmaceutical carriers or immunostimulants. The CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a discorder in a mammal, particularly microbial or fungal infections. The CC comprising the polynuclectide is also useful in genome mapping, physical CC mapping or in the positional cloning of genes. Specifically, the CC polypeptide or polynuclectide is useful for treating fungal or bacterial CC infections of the oral cavity (e.g. dental caries, plaque or tartar), CC vagina, urethra, ear, skin, respiratory tract (e.g. vystic fibrosis CC caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating CC systemic infections such as systemic Candida infection. The polypeptide CC or polynuclectide is also useful for veterinary applications e.g. for CC company clottide is also useful for veterinary applications e.g. for CC company cland specific sequences mannary enables of cCC mammary-qland specific sequences.

```
CC polypeptides, which comprise sequences expressed in bovine. Histatins are CC histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the CC oral cavity and have promise as therapeutic agents in humans with oral CC candidosis. Also disclosed are compositions comprising the histatin polypucleotide, and at least one compositions the polypucleotide, and at least one component consisting of CC physiological or pharmaceutical carriers or immunostimulants. The CC histatin polypucleotide, polypeptide, or the cosmetic composition CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a CC disorder in a mammal, particularly microbial or fungal infections. The CC histatin polymucleotide is also useful for treating fungal or bacterial compositions or in the positional cloning of genes. Specifically, the CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis CC caused by pseudomonas aeruginosa), mucosa or eye, as well as for treating CC systemic infections such as systemic Candida infection. The polypeptide cor polypucleotide is also useful for veterinary applications e.g. for creating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mare. infections of the oral cavity, vagina, urethra, ear or skin,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
 The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition
                                                                                                                                   Claim
                                                                                                                                                                        New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mare e.g. infections of the oral cavity, vagina, urethra, ear or skin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis;

disorder in a mammal, particularly microbial or fungal infections. The histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                  comprising the polypeptide,
                                                                                                                                                                                                                                                                                                                                                    is useful for treating (e.g.
                                                                                                                                                                                                                                                                                                                                                    gene therapy)

ANUBPS
ANUB The polynuclectide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis recularion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; antiinflammatory; nootropic; neuroprotective; care gastrointestinal; gene therapy; GENSET; heavy metal toxicity; inflammatory disease; immune disorder; neuromuscular; toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequences are useful for preparing a composition for treating GENSET related disorders. They can also be used as markers for the which the corresponding protein is preferentially expressed, as moweright markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively
GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the
                                                    The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer,
                                                                                                                                                                                                                                                                                                                                    New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bejanin

                                 The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP7563-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cance inflammatory disease; immune disorder; neuromuscular; toxicity; central nervous system; cardiovascular; gastrointestinal; gene; ss.

                                                                 The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs: from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNi biodiversity and for nutritional purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                         The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphorotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenotaroimma, melanoma).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity Matches 147; Conserv
                     The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, activin/inhibin activity, cadherin/tumour invasion suppressor activity, tumour invasion suppressor activity, tumour inhibition activity, and activity, the polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                     Agostino N
